JOURNAL OF ELECTROANALYTICAL CHEMISTRY

Subject index

Absolute electrode potential
Dissociative electron transfer to polyhalogen methanes CY_3X (Y = H, F, Cl and Br; X = Cl and Br) in solvent: a semiempirical PM3 method study 13
Activation energy
Asymmetry of inner-sphere reorganization energy for heterogeneous electron transfer 63
Adsorption
Adsorption of water molecules in slit pores 281
Amalgam-forming
A theory for amalgam forming electrode reactions 83
Anderson Hamiltonian
A theory for electron transfer between an electrode and a multilevel acceptor/donor species in an electrolyte solution 95
Anderson model
A theory for amalgam forming electrode reactions 83
Capillary condensation
Adsorption of water molecules in slit pores 281
Charge transfer
Asymmetry of inner-sphere reorganization energy for heterogeneous electron transfer 63
Heterogeneous process of charge transfer and phototransfer with participation of dipole particles 47
Charging process
Charging process in polypyrrole films: effect of ion association 121
Complexing properties
Theoretical model of radionuclide extraction from soils by the mechanism of ionic electromigration 27
Computer simulation
Computer simulation of the structure of the electrochemical double layer 327
Concentration profiles
Mechanisms behind concentration profiles illustrated by charge and concentration distributions around ions in double layers 233
Conducting polymer
Charging process in polypyrrole films: effect of ion association 121
Copper surface
The potential of mean force on halide ions near the Cu(100) surface 175
Corrosion
Simulation of growth and corrosion during the formation of a passive layer 203
CsF
Computer simulation of the structure of the electrochemical double layer 327
Current density
Kinetics of electroreduction of tris–oxalate cobalt(III) complexes on the dropping mercury electrode. 109
Diffusion
Theoretical model of radionuclide extraction from soils by the mechanism of ionic electromigration 27
Diffusion layer
Kinetics of electroreduction of tris–oxalate cobalt(III) complexes on the dropping mercury electrode. 109
Dissociative electron attachment
Dissociative electron transfer to polyhalogen methanes CY_3X (Y = H, F, Cl and Br; X = Cl and Br) in solvent: a semiempirical PM3 method study 13
Distribution functions
A primitive model for hexamethylpararosaniline (crystal violet) monomolecular adlayer: a Monte Carlo simulation study 213
Double layer
Kinetics of electroreduction of tris–oxalate cobalt(III) complexes on the dropping mercury electrode. 109
Electric double layer
Mechanisms behind concentration profiles illustrated by charge and concentration distributions around ions in double layers 233
Electric potential
Kinetics of electroreduction of tris–oxalate cobalt(III) complexes on the dropping mercury electrode. 109
Electrochemical cell
On the theoretical aspects of thermal effects in electrochemical cells 37
Oscillatory convective instability in electrochemical systems 7
Electrochemical double layer
Computer simulation of the structure of the electrochemical double layer 327
Electrode|electrolyte interface
First-principles simulations of the electrode|electrolyte interface 273
Electrode–electrolyte interface
A theory for electron transfer between an electrode and a multilevel acceptor/donor species in an electrolyte solution 95
Electrode processes
Molecular simulation of oxygen on supported platinum clusters 225
Electrode reactions
A theory for amalgam forming electrode reactions 83
Electrolyte
Mechanisms behind concentration profiles illustrated by charge and concentration distributions around ions in double layers 233
Electrolyte solution/liquid mercury interface
MD studies of electrolyte solution|liquid mercury interfaces 165
Electron transfer
Computer simulation of electron transfer processes across the electrode|electrolyte interface: a treatment of solvent and electrode polarizability 253
Electron-transfer
A theory for electron transfer between an electrode and a multilevel acceptor/donor species in an electrolyte solution 95
Electron transfer
Kinetics of electroreduction of tris–oxalate cobalt(III) complexes on the dropping mercury electrode. 109

Elementary act
Fluctuational self-consistency of the theory of the elementary act of electrochemical reactions in the neighbourhood of the equilibrium state 55
Experimental data
A theory for amalgam forming electrode reactions 83
External electric fields
Structure formation and dynamics of water in strong external electric fields 289
External electric potential
Molecular simulation of electrolytes in nanopores 265
First-principles simulation
First-principles simulations of the electrode|electrolyte interface 273
Fluctuations
Fluctuational self-consistency of the theory of the elementary act of electrochemical reactions in the neighbourhood of the equilibrium state 55
Frequency
Oscillatory convective instability in electrochemical systems 7
Frumkin correction
Kinetics of electroreduction of tris–oxalate cobalt(III) complexes on the dropping mercury electrode. 109
Growth simulation
Simulation of growth and corrosion during the formation of a passive layer 203
Halide adsorption
A lattice-gas model for halide adsorption on single-crystal electrodes 189
Halides
The potential of mean force on halide ions near the Cu(100) surface 175
Heat of formation of the surface
Heat of formation of the surface and the Gibbs-Helmholtz equation 3
Hexamethylpararosaniline (crystal violet)
A primitive model for hexamethylpararosaniline (crystal violet) monomolecular adlayer: a Monte Carlo simulation study 213
Hydrogen bonding
MD simulation of water at imperfect platinum surfaces. III. Hydrogen bonding 159
Hysteresis
Charging process in polypyrrole films: effect of ion association 121
Insulating liquid
Photoinjection of excess electrons into liquid hydrocarbons: a thermodynamic treatment 21
Intramolecular force
Molecular simulation of oxygen on supported platinum clusters 225
Ion exchange
Charging process in polypyrrole films: effect of ion association 121
Ionic conductivity
On the theoretical aspects of thermal effects in electrochemical cells 37
Theoretical model of radionuclide extraction from soils by the mechanism of ionic electromigration 27
Ion transfer
On the dynamics of electrochemical ion-transfer reactions 303
Joule heat
On the theoretical aspects of thermal effects in electrochemical cells 37
Kinetic model
Theoretical model of radionuclide extraction from soils by the mechanism of ionic electromigration 27
Lattice-gas model
A lattice-gas model for halide adsorption on single-crystal electrodes 189
Light absorption
Heterogeneous process of charge transfer and phototransfer with participation of dipole particles 47
Liquid hydrocarbons
Photoinjection of excess electrons into liquid hydrocarbons: a thermodynamic treatment 21
MD simulation
MD simulation of water at imperfect platinum surfaces. III. Hydrogen bonding 159
Micropores
Molecular simulation of electrolytes in nanopores 265
Model
A theory for amalgam forming electrode reactions 83
Molecular dynamics
Adsorption of water molecules in slit pores 281
Computer simulation of electron transfer processes across the electrode|electrolyte interface: a treatment of solvent and electrode polarizability 253
MD studies of electrolyte solution|liquid mercury interfaces 165
Molecular dynamics simulation of the water|nitrobenzene interface 335
Molecular simulation of electrolytes in nanopores 265
On the dynamics of electrochemical ion-transfer reactions 303
Molecular dynamics computer simulation
Structure and dynamics of water at water|Pt interface as seen by molecular dynamics computer simulation 313
Monomolecular adlayer
A primitive model for hexamethylpararosaniline (crystal violet) monomolecular adlayer: a Monte Carlo simulation study 213
Monte Carlo simulation
A lattice-gas model for halide adsorption on single-crystal electrodes 189
The potential of mean force on halide ions near the Cu(100) surface 175
Monte Carlo simulation study
A primitive model for hexamethylpararosaniline (crystal violet) monomolecular adlayer: a Monte Carlo simulation study 213
Multilevel species
A theory for electron transfer between an electrode and a multilevel acceptor/donor species in an electrolyte solution 95
NaCl
Computer simulation of the structure of the electrochemical double layer 327
Nonlocal dielectric response
Nonlocal nonlinear static dielectric response of polar liquids 143
Occupancy
First-principles simulations of the electrode|electrolyte interface 273
Order–disorder transition
A lattice-gas model for halide adsorption on single-crystal electrodes 189
Organic monolayers
A primitive model for hexamethylpararosaniline (crystal violet) monomolecular adlayer: a Monte Carlo simulation study 213
Oscillation
Oscillatory convective instability in electrochemical systems 7
Oxygen
Molecular simulation of oxygen on supported platinum clusters 225
Pair distributions
Mechanisms behind concentration profiles illustrated by charge and concentration distributions around ions in double layers 233

Partial charge transfer
Fluctuational self-consistency of the theory of the elementary act of electrochemical reactions in the neighbourhood of the equilibrium state 55
Passive layer formation
Simulation of growth and corrosion during the formation of a passive layer 203
Photoinjection
Photoinjection of excess electrons into liquid hydrocarbons: a thermodynamic treatment 21
Phototransfer
Heterogeneous process of charge transfer and phototransfer with participation of dipole particles 47
Platinum clusters
Molecular simulation of oxygen on supported platinum clusters 225
Platinum surfaces
MD simulation of water at imperfect platinum surfaces. III. Hydrogen bonding 159
pmf
The potential of mean force on halide ions near the Cu(100) surface 175
PM3 method
Dissociative electron transfer to polyhalogen methanes CY_3X (Y = H, F, Cl and Br; X = Cl and Br) in solvent: a semiempirical PM3 method study 13
Polar electrolyte
A theory for electron transfer between an electrode and a multilevel acceptor/donor species in an electrolyte solution 95
Polarizability
Computer simulation of electron transfer processes across the electrode|electrolyte interface: a treatment of solvent and electrode polarizability 253
Polar liquids
Nonlocal nonlinear static dielectric response of polar liquids 143
Polypyrrole
Charging process in polypyrrole films: effect of ion association 121
Quantum chemistry
Asymmetry of inner-sphere reorganization energy for heterogeneous electron transfer 63
Quartz microbalance
Charging process in polypyrrole films: effect of ion association 121
Radial distribution function
MD studies of electrolyte solution|liquid mercury interfaces 165
Radical anions
Dissociative electron transfer to polyhalogen methanes CY_3X (Y = H, F, Cl and Br; X = Cl and Br) in solvent: a semiempirical PM3 method study 13
Scanning tunneling microscopy
A primitive model for hexamethylpararosaniline (crystal violet) monomolecular adlayer: a Monte Carlo simulation study 213
Simulation
Computer simulation of electron transfer processes across the electrode|electrolyte interface: a treatment of solvent and electrode polarizability 253
Molecular dynamics simulation of the water|nitrobenzene interface 335
On the dynamics of electrochemical ion-transfer reactions 303
Single-crystal electrodes
A lattice-gas model for halide adsorption on single-crystal electrodes 189
Slit pores
Adsorption of water molecules in slit pores 281
Solvation energies
Nonlocal nonlinear static dielectric response of polar liquids 143
Specific adsorption
The potential of mean force on halide ions near the Cu(100) surface 175
Statistical fluctuations
First-principles simulations of the electrode|electrolyte interface 273
Statistical mechanics
Mechanisms behind concentration profiles illustrated by charge and concentration distributions around ions in double layers 233
Structure/dynamics
Structure and dynamics of water at water|Pt interface as seen by molecular dynamics computer simulation 313
Structure formation
Structure formation and dynamics of water in strong external electric fields 289
Surface force
Adsorption of water molecules in slit pores 281
Temperature
On the theoretical aspects of thermal effects in electrochemical cells 37
Theory
A theory for amalgam forming electrode reactions 83
A theory for electron transfer between an electrode and a multilevel acceptor/donor species in an electrolyte solution 95
Thermodynamic analysis
Photoinjection of excess electrons into liquid hydrocarbons: a thermodynamic treatment 21
Transported entropy
Heat of formation of the surface and the Gibbs-Helmholtz equation 3
Transport properties
Molecular simulation of electrolytes in nanopores 265
Water
MD simulation of water at imperfect platinum surfaces. III. Hydrogen bonding 159
Water dynamics
Structure formation and dynamics of water in strong external electric fields 289
Water|nitrobenzene interface
Molecular dynamics simulation of the water|nitrobenzene interface 335
Water|Pt interface
Structure and dynamics of water at water|Pt interface as seen by molecular dynamics computer simulation 313
Water structure
Adsorption of water molecules in slit pores 281
